Subject: Phase I stockpiled soils

Dear Tom – I would like some samples of the potentially contaminated soils from Phase I in order to decide whether the soils can go back into the excavation or need off-site disposal. The soil in question is in two rolloff boxes and some stockpiles covered with plastic.

I would like samples taken from the two rolloff boxes of soil and the stockpiles. I think four samples total would be sufficient. Please have them analyzed for VOCs, method 8260, with all analytes reported.

I recommend that these samples be taken as soon as possible with the shortest turnaround time for laboratory analysis in order to make a timely decision for backfilling versus off-site disposal.

Thank you.
